4 years in Blockchain: Blockstream & Hyperledger

Agenda

1

**Introduction to
Blockchain
Technologies**

2

The Linux
Foundation and
Hyperledger

3

Sample Use
Cases

An aerial view of a city skyline, likely New York City, with a green and blue color overlay. In the bottom left corner, there is a network diagram consisting of yellow nodes connected by lines. The text "What are Blockchain Technologies?" is centered in white.

What are Blockchain Technologies?

Encompasses both **distributed ledgers** and **smart contracts**.

It's all about money, money, money

The first long-distance trade occurred between Mesopotamia and Indus valley in Pakistan ~3000 b.C

The background features a blurred image of an open book with text on its pages. Overlaid on the right side is a green geometric network consisting of interconnected lines and circular nodes, resembling a molecular or data structure.

How Do You Agree on Assets Balance?

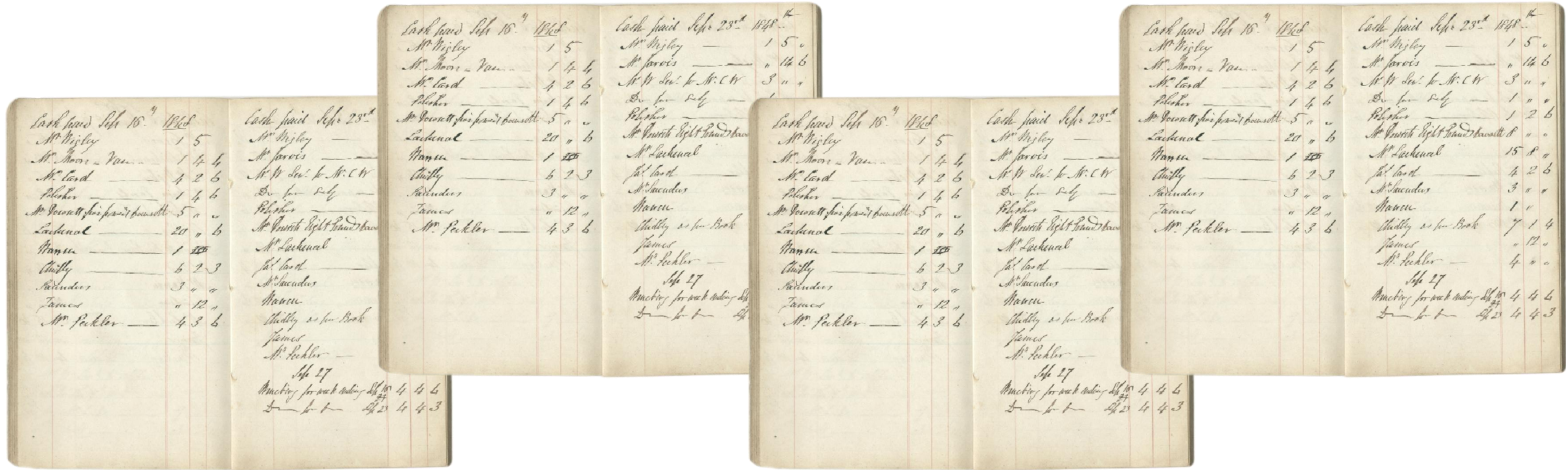

How to track the value of exchanged goods?

Traditional Ledgers

Cash paid Sept 16 th 1848			Cash paid Sept 23 rd 1848

Digital World

In the digital world there are many copies that may contain different versions. The challenge: which do you trust as a single source of truth?

LET ME INTRODUCE YOU

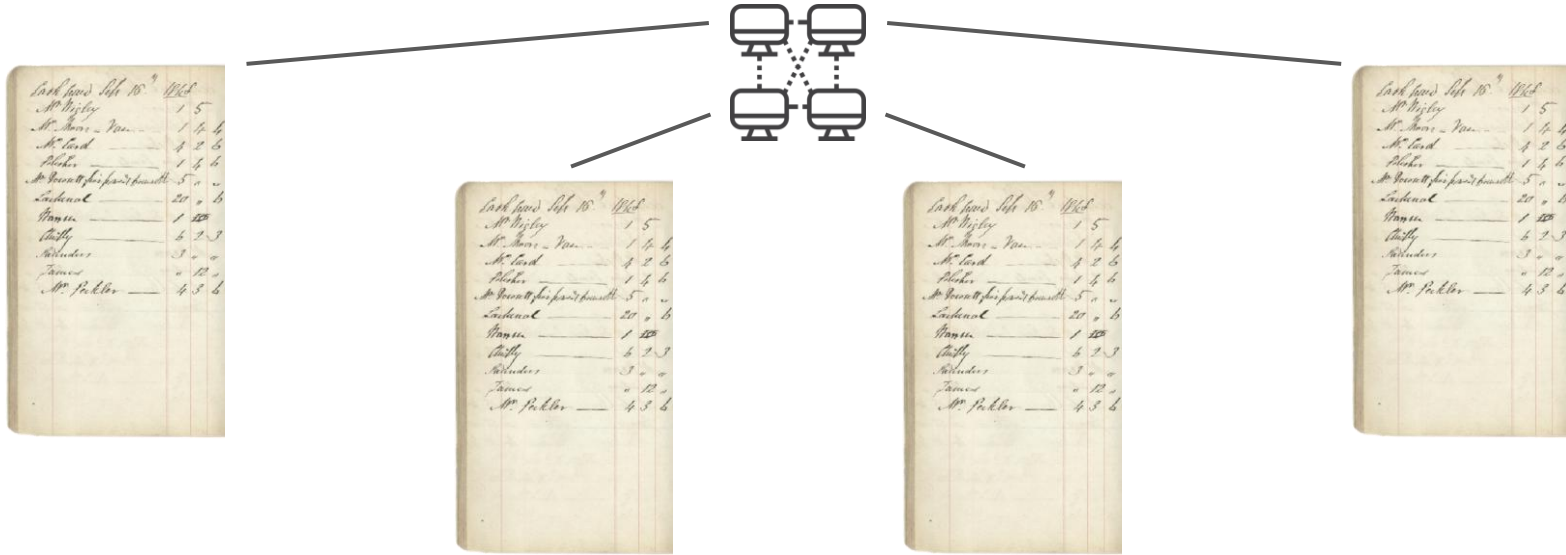

**Internet Connected
Reality**

TO THE INTERNET

Potential of Peer to Peer Network

Now we can keep our ledgers in sync—provided we can agree

What is a Distributed Ledger?

An **append-only system**
of record or log of transactions.

A woman with dark curly hair, wearing a light-colored top and a dark skirt, stands in the center of a meeting room, smiling and gesturing with her hands. She is addressing a group of people whose heads and shoulders are visible in the foreground, mostly out of focus. The room has a whiteboard in the background with some faint diagrams. A large, stylized network diagram with blue nodes and lines is overlaid on the right side of the image. The entire scene is bathed in a blue and purple light.

Distributed Ledgers in Action

All businesses participating in a commercial ecosystem need a ledger to contain a record of transactions. **It is vitally important to know that your copy of the ledger is identical to others' in the network.**

Example Scenario

1

Everyone in a room has a book with the instructions to write down entries as they get called out.

2

Someone calls out item number one and everyone writes it down.

3

Then two people call out item number two at the same time, but the item number differs.

4

There needs to be a process for who wins, and the loser gets to try to call out item number three.

5

When all agree on the outcome of an entry, the next link in that ledger can be written.

6

Whether this happens in a small scale or the size of the internet, that is the spectrum for how a distributed ledger can work.

A blue-tinted photograph of a business meeting. In the foreground, a person in a suit is pointing at a tablet held by another person. The background is blurred, showing other people in a meeting. A white network diagram with nodes and lines is overlaid on the left side of the image. The text "What is a Smart Contract?" is centered in white.

What is a Smart Contract?

The code or any complex program stored and executed on a blockchain.

The image features a blue-tinted background showing a person's hands holding a credit card over a laptop keyboard. On the left side, there is a white network diagram with nodes and connecting lines. The text "Smart Contracts in Action" is centered in white.

Smart Contracts in Action

Imagine a farmer based in Sacramento, California buys an insurance agreement that protects them from extreme weather condition. If temperatures reach more than 100 degrees for 100 days, they get reimbursed 10,000 USD.

With today's ledgers, the insurer might find a way to back out of, procrastinate or dispute this agreement.

If a Smart Contract is in place, the script in the ledger would rule that on that 100th day of 100+ degrees, the 10,000 USD would be automatically withdrawn. With an automated process, like it or not, the insurer cannot back out.

Facets of distributed, shared ledgers

Network nodes both **generate their own data** and **verify data** generated by others

Contain historic record of verified transactions and **easily auditable**

Distributed Consensus eliminates costly and inefficient reconciliation processes

No central repository – each node stores identical copies of the ledger

Resilient due to network power and cryptographic integrity

Large economic **disincentive for malicious** actors

Google These Words

Consensus

PoW, PoS, POET, RaFT,
BFT, PBFT

Crypto/Security

PKI, HASH, SHA-256,
zk-SNARK, HE, ECC, EXDSA,
SGX

Ledger Concepts

Mining, Blocks,
Forks, Parents, Uncles,
Merkle Trees

Platform Concepts

Nodes, Oracles,
Notaries, Wallet, Smart
Contracts

Agenda

Hyperledger**

3

Sample Use
Cases

The background is a blue-tinted image of a shipping yard with stacks of containers. A network diagram with nodes and lines is overlaid on the right side. The text is centered in white.

The Linux Foundation is Much More than Linux

Security

We are helping global privacy and security through a program to encrypt the entire internet.

Networking

We are creating ecosystems around networking to improve agility in the evolving software-defined datacenter.

Cloud

We are creating a portability layer for the cloud, driving de facto standards and developing the orchestration layer for all clouds.

Automotive

We are creating the platform for infotainment in the auto industry that can be expanded into instrument clusters and telematics systems.

Web

We are providing the application development framework for next generation web, mobile, serverless, and IoT applications.

Blockchain

We are creating a permanent, secure distributed ledger that makes it easier to create cost-efficient, decentralized business networks.

We are regularly adding projects; for the most up-to-date listing of all projects visit tlfprojects.org

Introducing

HYPERLEDGER

BLOCKCHAIN TECHNOLOGIES FOR BUSINESS

Open source
collaborative effort
to advance cross-
industry **blockchain**
technologies

Hosted by
The Linux Foundation,
fastest-growing
project in LF history

Global collaboration
spanning finance,
banking, IoT, supply
chains, manufacturing
and technology

The Hyperledger Vision

Blockchain promises to change the way business is conducted and transactions are executed across industries. Precisely how, and the pace at which, each of these industries adopts blockchain will surely vary.

There will never be one global chain-of-all chains that all industries convert to.

Similar to The Linux Foundation, Hyperledger also has a modular approach to hosting projects. Think of Hyperledger as a **greenhouse** growing and sustaining business blockchain projects from seed to fruition. The Linux Foundation and Hyperledger provide the infrastructure for open development to occur among a diverse and thriving community.

HYPERLEDGER
BLOCKCHAIN TECHNOLOGIES FOR BUSINESS

Community Stewardship and Technical, Legal, Marketing, Organizational Infrastructure

Frameworks

**HYPERLEDGER
BURROW**

Permissionable smart contract machine (EVM)

**HYPERLEDGER
FABRIC**

Permissioned with channel support

**HYPERLEDGER
INDY**

Decentralized identity

**HYPERLEDGER
IROHA**

Mobile application focus

**HYPERLEDGER
SAWTOOTH**

Permissioned & permissionless support; EVM transaction family

Tools

**HYPERLEDGER
CALIPER**

Blockchain framework benchmark platform

**HYPERLEDGER
CELLO**

As-a-service deployment

**HYPERLEDGER
COMPOSER**

Model and build blockchain networks

**HYPERLEDGER
EXPLORER**

View and explore data on the blockchain

**HYPERLEDGER
QUILT**

Ledger interoperability

**Sample Use
Cases**

Why Business Blockchain Technologies

Spectrum of Blockchains

Permissioned vs. Permissionless: Who can write to a Blockchain (i.e., accessibility)

Public vs. Private: Who can read from a Blockchain (i.e., visibility)

Permissionless Public

Permissionless Private

Permissioned Public

Permissioned Private

Bitcoin, Ethereum

Public Polls

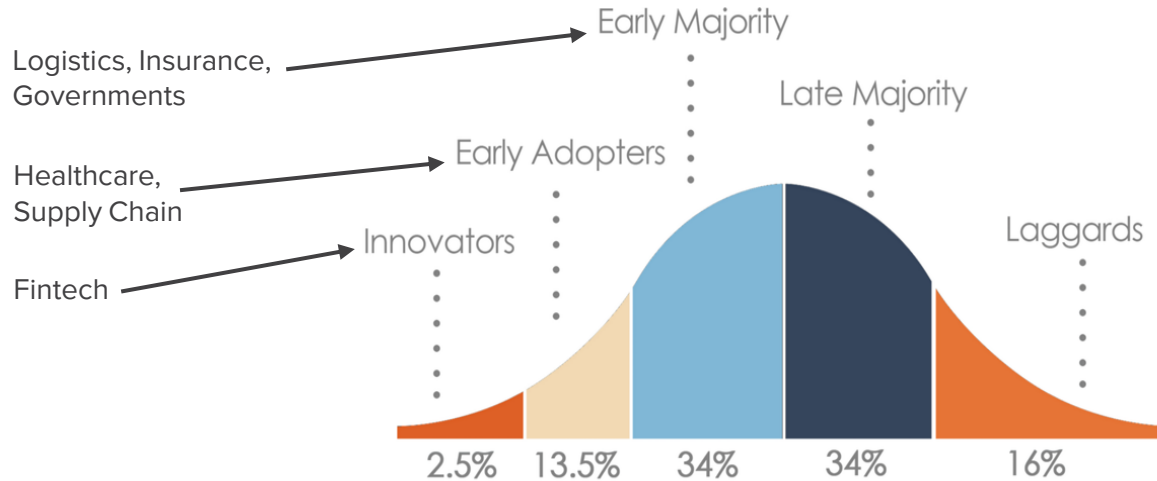

Land titles, University degrees

Medical records

Blockchain Industries Curve

Diffusion of Innovations Curve, by Everett Rogers

Not all problems can be solved with Blockchain

Deployments & Use Cases

The background of the slide is a gradient from purple on the left to blue on the right. In the center, there is a faint image of an open book. On the right side, there is a network diagram consisting of several blue circular nodes connected by thin blue lines, forming a complex web-like structure.

Hyperledger embraces the full spectrum of industry use cases, especially enterprise scenarios with widely varied requirements for decentralization, trust, continuity and confirmation times. Each represents a potentially unique optimization point for the technology.

The background features a blurred medical setting with a stethoscope on a clipboard, a laptop, and a hand typing. A blue network diagram with nodes and lines is overlaid on the right side. The text is centered in white.

Interstate Medical Licensing

Interstate Medical Licensing

The Challenge

Interstate medical licensing is complex, and the provider directories and claims adjudication processes need increased trust and transparency.

The Collaboration

Hyperledger members Hashed Health and the State of Illinois have implemented a pilot program to identify opportunities to improve the efficiency and accuracy of these processes in Illinois.

The Technology

A blockchain-based registry, built using Hyperledger Fabric, streamlines the sharing of smart contracts and medical credential data to automate workflow associated with interstate and multistate licensure.

The image features a close-up of a computer keyboard with a blue-to-purple gradient overlay. A fingerprint scanner icon is centered over the keyboard. In the bottom-left corner, there is a network diagram consisting of blue lines and circular nodes. The text "Digital Identity" is written in white, bold, sans-serif font across the center of the image.

Digital Identity

Digital Identity

The Challenge

As of 2017, only 44% of Filipinos were utilizing bank accounts, hampered by inefficient "Know Your Customer" laws.

The Collaboration

The Bankers Association of Philippines (BAP), in partnership with Hyperledger member Amihan and a coalition of major banks, undertook a POC to test a nation-wide self-sovereign ID system.

The Technology

The POC used Hyperledger Indy to develop a platform that streamlines new account onboarding, allowing consumers to enter information once in a digital and privacy-preserving way.

Green Assets Management

Green Assets Management

The Challenge

Generating carbon assets more efficiently, helping to build a green, low-carbon and environmentally-friendly future in China.

The Collaboration

General Hyperledger member Energy Blockchain Labs partnered with Premier member IBM on the world's first blockchain-based green assets management platform, based on Hyperledger Fabric.

The Technology

Blockchain technology, like the use of Hyperledger Fabric here, is expected to become an important means for effective control of carbon emissions in China, the world's largest source of carbon emissions. Carbon asset development, is one of the most popular ways of encouraging enterprises to decrease emissions and use low carbon emission technology.

The image features a two-story house with a prominent front porch and a two-car garage. The house is set against a backdrop of trees. In the foreground, there is a driveway and a sign that reads "Available Lot #". The entire image is overlaid with a green and blue color scheme. A network diagram with yellow lines and nodes is visible in the bottom left corner.

Real Estate Transactions

Real Estate Transactions

The Challenge

In some cases of corruption, the move to government-owned centralized databases backfired, and digital histories of land titles were eradicated, properties seized and handed over to oil companies.

The Collaboration

The winning team at the Consensus 2017: Building Blocks Hackathon, built an online property banking and acquisition game utilizing Hyperledger Fabric with IBM Bluemix.

The Technology

HyperProperty shows that Hyperledger Fabric can be used to guarantee who owns what properties. Decentralizing databases and turning to DLTs track land titles could keep governments accountable and create a more trustworthy system, even in instances where the individual actors may not be trusted.

A hand is shown using a rubber stamp on a document. The stamp is being pressed onto the paper. A pen is visible in the foreground, and another hand is visible in the background, possibly holding the document steady. The image has a green and blue color overlay.

Letters of Credit

Letters of Credit

The Challenge

The LOC process is a difficult one to automate due to the sheer number of network participants involved.

The Collaboration

Institutions in Singapore, including Monetary Authority of Singapore, several banks and Standard Chartered, as well as China CITIC Bank and Minsheng bank have come together to use blockchain to create a LOC system. One of the first transactions of this kind in China saw a 100 million letter of credit transaction be completed without a hitch.

The Technology

Asian markets have been deploying and developing various solutions for LOC based on Hyperledger Fabric. Blockchain provides a common ledger for LOC and presents a modernized opportunity; the LOC is stored on the blockchain, and once spent, is marked as such so that the value of the letter cannot be spent again.

Digital Trade Chain

Digital Trade Chain

The Challenge

Today, banks live in a competitive world. Small and mid-sized businesses generated 85% of employment growth in Europe in recent years, but only ~50% of them have access to formal credit. The Digital Trade Chain exemplifies how blockchain can bring the required trust and transparency to a new business network and associated business model.

The Collaboration

A consortium of major world banks including: Deutsche Bank, HSBC, KBC, Natixis, Rabobank, Société Générale, Santander, UniCredit and Nordea

The Technology

we.trade is a blockchain-based international trading system that enables accurate trading posture information, order to settlement control, risk coverage, track and trace options
