

Title: “Services Computing: shaping the new wave”

Session Chairs: Pierluigi Plebani, Stefan Schulte, Damian Andrew Tamburri

Abstract: Service computing has evolved many times and in many directions since its appearance in the late 90s/early 2000s: Web services, REST services, APIs, XaaS, microservices, serverless. The goal of the session is to simulate the discussion around topics, proposed by researchers and practitioners, which will guide the next evolution of service computing in the upcoming years. One of the main outcomes of the meeting will be an initial draft of a manifesto – to be finalized in the following period – helpful for our community.
